SUMMARY

Aspiring software developer with a strong grasp of Node.js and Express, developing a real-time AI-Powered Email Aggregator to sharpen skills in building efficient and scalable real-time applications, with a tech-independent mindset to choose the best tools for the problem.

TECHNICAL SKILLS

Languages: Python, Java, Javascript

Databases: MySQL, MongoDB, PostgreSQL

Tools: Git, AWS

Developer Stack: Tailwind CSS, React, Node.js, Express, Rest APIs

Skills: Data Structures and Algorithms, Problem Solving, Team-building Collaboration, Debugging

Coursework: Analysis and Design of Algorithms, DBMS, OOP, Operating system, Computer network

EXPERIENCE

Tech Trainee, TalentNext

May. 2024 – Sep. 2024

Wipro

Remote, India

- The training emphasized hands-on learning with modules on Spring Framework, Hibernate, Rest APIs, and database integration.
- The program also included sessions on deploying applications in real-world environments using tools such as Docker and CI/CD pipelines.

PROJECTS

OneBox – AI-Powered Email Aggregator | *Node.js, TypeScript, React, IMAP, Docker* June 2025 – Present

- Engineered a full-stack platform that aggregates emails from Gmail/Outlook, supporting multi-account IMAP sync and real-time email retrieval across inboxes.
- Integrated LLM-based RAG (Retrieval-Augmented Generation) to auto-suggest replies, reducing manual response time by nearly 70 percent for SDRs and recruiters.
- Deployed Slack/webhook alerts and Elasticsearch-powered search, enabling users to track and respond to hot leads in under 5-10 seconds from a centralized dashboard.

QuickBot : Real-time chat application | *Node.js, MongoDB, React, Socket.IO* April 2025 – May 2025

- Developed a full-stack real-time chat application using the MERN stack (MongoDB, Express.js, React, Node.js) with Socket.IO for bi-directional communication.
- Ensured responsive UI with React and Tailwind CSS, improving user experience across devices.

Image Forgery and Tampering Detection | *Python, scikit-learn, TensorFlow, CNN* Jan 2025 – Apr 2025

- Improved a computer vision system to detect manipulated digital images using Error Level Analysis (ELA) and a custom Convolutional Neural Network (CNN) model.
- Enhanced CNN model performance through hyperparameter tuning and data augmentation techniques.
- As a result, we obtained 98.68 per cent accuracy.

EDUCATION

Galgotias College of Engineering and Technology

Greater Noida, India

Computer Science Engineering

2021 - 2025

ACHIEVEMENTS

AWS Cloud Practitioner Essentials - AWS —Certificate

Issued Apr 2025

TalentNext Java Full Stack - Wipro —Certificate

Issued Oct 2024

3rd Runner UP Google-O-Tech-n-thon

5 Star Rated Coder on HackerRank(Problem Solving)
